

What is claimed is;

1. A method of making a reservation for facility utilization comprising the steps of;

making a reservation for facility utilization from terminal equipment on a side of a facility user;

5 registering data of the facility user in a server in order of reception in response to said reservation for facility utilization received via a communication channel; giving an instruction for updating the data of the facility user to said server from terminal equipment on a side of the facility via the communication channel; and

10 updating said instructed data of the facility user in said server.

2 A method of making a reservation for facility utilization as claimed in claim 1, further comprising the step of canceling own reservation from said terminal equipment on the side of the facility user.

3 A method of making a reservation for facility utilization as claimed in claim 1, wherein the reservation made from the said terminal equipment on the side of the facility user and the instruction for updating the data of the facility user given from said terminal equipment on the side of the facility are  
5 performed via home pages on the Internet.

4 A method of making a reservation for facility utilization as claimed in claim 2, wherein the reservation made from the said terminal equipment on the side of the facility user and the instruction for updating the data of the facility user given from said terminal equipment on the side of the facility are

5 performed via home pages on the Internet.

5 A method of checking the wait sate of facility utilization as claimed in claim 1, further comprising the steps of;

transmitting data of waiting time of the facility user registered in said server from said terminal on the side of the facility to said server via the  
5 communication channel and

registering said data of waiting time of the facility user in said server.

6 A method of checking the wait sate of facility utilization as claimed in claim 2, further comprising the steps of;

transmitting data of waiting time of the facility user registered in said server from said terminal on the side of the facility to said server via the  
5 communication channel and

registering said data of waiting time of the facility user in said server.

7 A method of checking the wait sate of facility utilization as claimed in claim 3, further comprising the steps of;

transmitting data of waiting time of the facility user registered in said server from said terminal on the side of the facility to said server via the  
5 communication channel and

registering said data of waiting time of the facility user in said server.

8. A method of checking the wait state of facility utilization comprising the steps of;

making a reservation for facility utilization from terminal equipment on a side of a facility user,

5 registering data of the facility user in a server in order of reception in response

to receiving said reservation for facility utilization via a communication channel,

giving an instruction for updating the data of the facility user to said server from terminal equipment on a side of a facility via the communication channel,

10 updating said instructed data of the facility user, and

browsing the data of the facility user registered in said server from said terminal equipment on the side of the facility user.

9 A method of checking the wait state of facility utilization as claimed in claim 8, wherein the reservation made from the said terminal equipment on the side of the facility user and the instruction for updating the data of the facility user given from said terminal equipment on the side of the facility are  
5 performed via home pages on the Internet.

10 A method of checking the wait state of facility utilization as claimed in claim 8, further comprising the steps of;  
transmitting waiting-time data of the facility user registered in said server from said terminal on the side of the facility to said server via the  
5 communication channel and  
registering said waiting-time data of the facility user in said server.

11 A method of checking the wait state of facility utilization as claimed in claim 9, further comprising the steps of;  
transmitting waiting-time data of the facility user registered in said server from said terminal on the side of the facility to said server via the  
5 communication channel and  
registering said waiting-time data of the facility user in said server.
